

Archimiddle

Architecting with middleware

SERVICES

•SOA consultancy

Service-oriented methodologies are applied to your business to start or improve a SOA. Analysis and design processes are applied in order to identify entity, utility, and task services. These can be cast in a layered service-oriented reference architecture, set within your business's IT environment.

The reference architecture can be designed using top-down or bottom-up approaches, depending on your specific environment

SOA middleware

•Archimiddle is a specialist in Oracle Fusion Middleware to help you install the right software for your SOA initiative. We specialize in the Oracle Service Bus, the Oracle SOA Suite and the Oracle BPM Suite.

•Service implementations

Archimiddle can supply people to implement your services in a variety of technologies, such as services built directly on the Oracle Fusion Middleware platform, and stand-alone services built on the Java, .Net, or Oracle ADF platforms.

•SOA education

Through coaching, auditing, and custom training, Archimiddle helps your IT people get to grips with SOA.

Company profile

Archimiddle specializes in architecting with middleware, with special focus on service-oriented architectures.

Archimiddle is the service-oriented architecture (SOA) competence centre within the Cronos Group and has several years of hands-on experience in consultancy for enterprise service bus (ESB) and business process management (BPM) related projects.

We specialize on the ESB, BPM, and governance tools such as the service registry and repository, and monitoring tools.

Archimiddle can set up SOA tools in your organization, apply SOA best practices, and service-enable your legacy applications.

Archimiddle specializes in open technologies such as XML, XQuery, XSLT, SOAP, web services, WS-* standards, and has in-depth knowledge of such middleware tools as the Oracle Service Bus, Oracle BPM, Oracle BPEL Process Manager and BPA, Oracle Service Registry, and Oracle Web Services Manager.
